PRODUKTINFORMATION

The EZ decoder system is a unique two-wire output option for Hunter ICC2 and HCC controller models only. EZ-DM may also be combined with ICM-800 and ICM-400 modules for “hybrid” operation. They can use “conventional” solenoid wiring and two-wire technology at the same time, up to 54 stations maximum. It is recommended to install all conventional modules in the lower-numbered slots, and install the EZ-DM in the next available slot.
